Y(3S) → gamma chibJ(2P) → gamma 3pi Y(1S)

Table 4: The integrated luminosities of the on-resonance ($\mathcal{L}_{\rm on}$) and off-resonance ($\mathcal{L}_{\rm off}$) data samples recorded at and just below the Υ resonances, and the ratio between the on- and off-resonance integrated luminosities. For each entry, the first uncertainty is statistical, the second uncertainty is systematic, and the total relative uncertainty in percent is given in parentheses.

Resonance	$\mathcal{L}_{\rm on}$ ($\rm fb^{-1}$)	$\mathcal{L}_{\rm off}$ ($\rm fb^{-1}$)	$\mathcal{L}_{\rm on}/\mathcal{L}_{\rm off}$

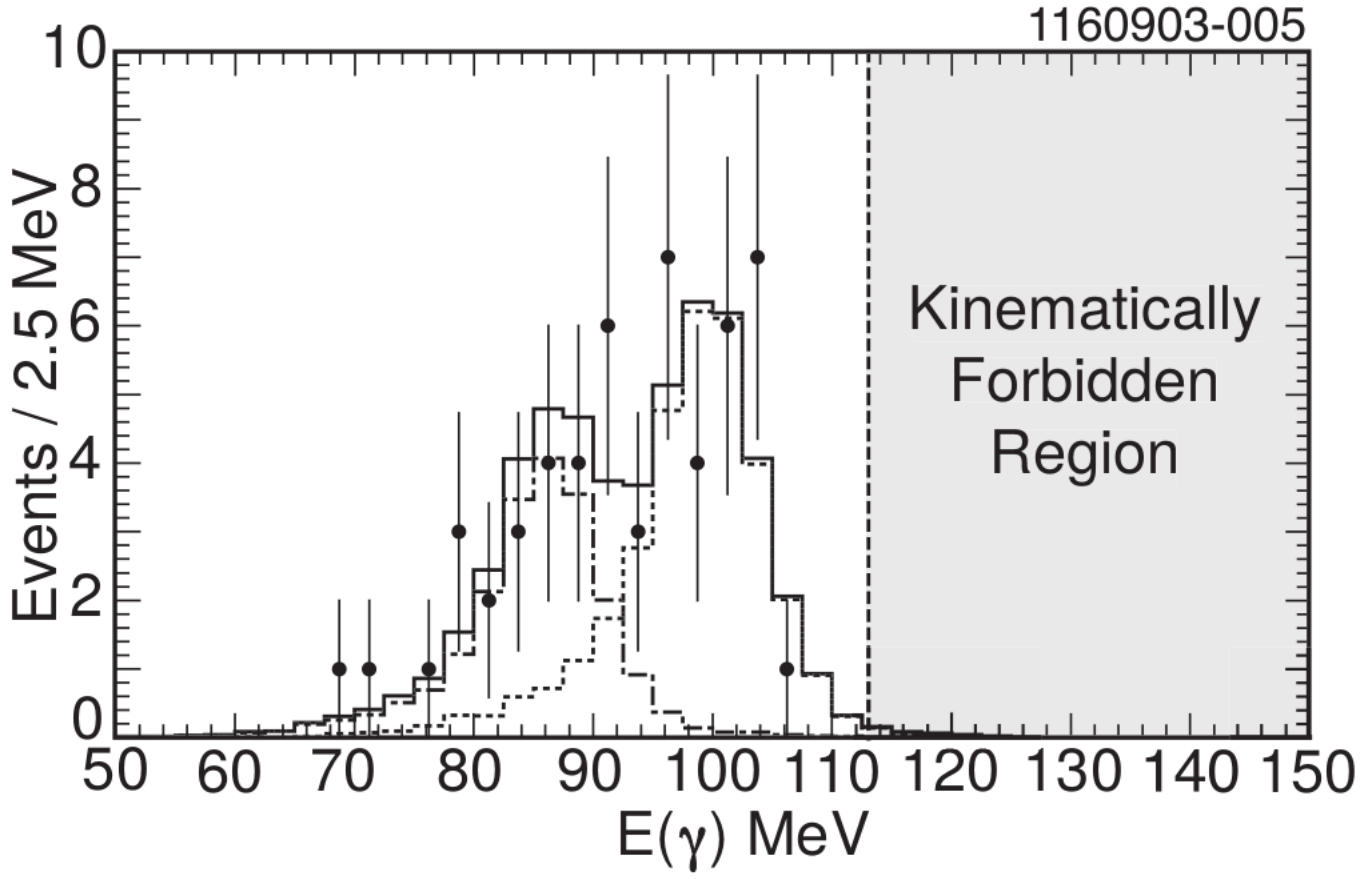

FIG. 4: Fitted photon energy spectrum for the final selection of events. The solid histogram shows contributions for both $\chi_{b1}(2P)$ and $\chi_{b2}(2P)$, while the dotted and dashed histograms show the individual $\chi_{b1}(2P)$ and $\chi_{b2}(2P)$ contributions, repsectively. The dotted line indicates the region above which γ energies are disallowed for lack of phase space.
